DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12/11/2008 has been entered.

Allowable Subject Matter

2. Claims 11-14, and 16-21 are allowed.

The following is an examiner's statement of reasons for allowance: (also see Applicant's Remarks dated 11/06/2008 and the Office Action dated 11/28/2008):

Lingman (USPAP. 2004/0167705) discloses Method for estimating the mass of a vehicle which is being driven on a road with varying gradient, comprising the following method steps: measurement of the vehicle's speed for generating input data for a calculation device; measurement of a variable which comprises a longitudinal force acting on the vehicle for generating input data for a calculation device, and method for estimating the gradient of a road on which a vehicle is being driven, comprising the following method steps: measurement of the vehicle's speed for generating input data for a calculation device; measurement of a variable which comprises a longitudinal force

acting on the vehicle for generating input data for a calculation device [see Lingman: Abstract; Paragraphs [0007], [0011], [0020], [0034], [0036], and [0094]].

Iwasaki (USPN. 5,944,763) discloses that in an apparatus and method for a vehicular system, a control gain of a control signal to be outputted to the vehicular system is varied when a change in a weight of load applied to a vehicle body between an originally designed weight of load applied to a vehicle body and a present weight of load applied to the vehicle body occurs. The change in the weight of load applied to the vehicle body is determined according to a load mounted state determination signal R_M which is derived on the basis of a front road wheel side vertical status variable and a rear road wheel side vertical status variable [see Iwasaki: Abstract; Abstract; col. 2, lines 29-60].

Regarding claim 11, the closest prior art (Lingman and Iwasaki), either singularly or in combination, fail to anticipate or render obvious wherein "estimating the inclination of the surface on which the motor vehicle is traveling based on the acceleration variation due to errors, the recursive least-squares algorithm depends on the inclination and has at least tow modes, a flat mode when the inclination is within a predetermined interval of values corresponding to a plane surface, and a slope mode when the inclination is not within the predetermined interval of values corresponding to the plane surface" in combination with all other limitations in the claims as defined by Applicant.

Claims 12-14, and 16-18 depend from allowed claim 11 and therefore are also allowed.

Regarding claim 19, the closest prior art (Lingman and Iwasaki), either singularly or in combination, fail to anticipate or render obvious wherein "means for estimating total mass of the vehicle by a recursive least-squares Second Law of Motion, by analysis of errors, by an acceleration variation due to errors comprising an error in variation of the mass of the vehicle relative to a reference mass, an error in inclination of the surface on which the vehicle is traveling, and errors of a model; means for enabling the processing of the data when the data remains respectively in predetermined intervals of values that ensure validity of the model; and supervising means for providing a default mass as long as the algorithm has not converged, by fixing the estimated mass when a predetermined convergence criterion has been reached" in combination with all other limitations in the claims as defined by Applicant.

Claims 20-21 depend from allowed claim 19 and therefore are also allowed.

Conclusion

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
